June 30, 2008

I should have written this a long time ago, but now seems better than ever! It has been almost 12 years (1996) since I moved into my home in the Hillsborough Addition in NW Omaha. It was built by Dave Cannon and his family business. Over the years, I have had no problems. The big point I want to mention is that many of my neighbors have water in their basement from time to time. We all live on an elevated area. My basement has never had such a problem. In August 1997 we had 10 inches of rain in 24 hours. No problem at my house! Just recently, we had the wind/hail/rain storm (June 27, 2008). My neighbors behind me and on the sides all experienced water in the basement. Again, not a drop of moisture in my finished basement. I can only attribute this to Dave Cannon and his company giving full attention to proper grading, drain tile installation and backfilling to the foundation. Just thought it is time to pass this info onto you.

Thanks.
